

Sustaining Projects

GRAHAM

MAJOR CAPITAL CONSTRUCTION

SUSTAINING PROJECTS

MAINTENANCE & TURNAROUNDS

Specializing in small to medium capital construction, we execute sustaining projects across multiple industries under a variety of commercial models.

We provide the knowledge and skilled workforce to support modifications, expansions and debottlenecking operations for industrial facilities across Canada and the US. Our innovation and success is driven by our construction management policies, processes, systems and procedures.

CREATING SUSTAINABLE VALUE

Graham understands that each project is different. Project specific criteria guide our methodology of execution and structure our approach to the unique requirements of each project, and allow for adaptability to any market or environment.

Whether performing sustaining project work as a part of an integrated program, or as a stand alone offering, we always tailor our services to deliver the best possible value for our customers.

Innovation

Implementation of Process and Procedures

Performance Management

Collaborative Working Relationships

Effective Personnel and Equipment Management

Effective Planning

OUR CAPABILITIES

- Brownfield capital construction
- Project management support and controls
- Installations, repairs and demolitions
- Debottlenecking
- Mechanical and electrical
- Structural
- Piping
- Scaffolding and insulation
- Project planning and scheduling

PROJECT EXPERIENCE

Facility Upgrader

- Facility upgrade and refurbishment
- Planned and unplanned outages work
- Debottlenecking and optimization
- Equipment installation and repairs
- Multi-disciplined, self-performed services
- Replacement of facility electrical distribution system

SAGD Expansion Projects

- Equipment repair and/or replacement
- Large tank, pump and vessel installations
- Compressor station, building and skid installations
- Valve station setting
- Mechanical, electrical and instrumentation including all testing
- Specialty welding
- Scaffolding and insulation
- Structural steel installation and repairs

Wellpads & Gathering Lines

- Fabrication and field installation of well pads
- Above ground and below ground gathering and lateral lines (emulsion, produced gas, steam, natural gas etc.) up to NPS 48"
- Module setting and facility tie-ins
- Mechanical, electrical and instrumentation
- Pre-commissioning and commissioning support

Midstream

- Fabrication and field installation
- Compression and metering Stations
- Above ground and below ground pipeline
- Facility tie-Ins and Construction
- Mechanical, electrical and instrumentation
- Civil, structural, scaffolding, insulation

WHY GRAHAM?

We Think Like an Owner

- Create sustainable value through continuous improvements
- Reduce costs and maximize production
- Commitment to support local and Indigenous communities

Contractor of Choice

- Develop programs to reduce costs, increase productivity and bring value to clients
- Nearly 100% repeat business or long term contracts from loyal customers

Project Bundling Capabilities

- Scheduling similar projects sequentially to enable crews to move from one project to the next.

Flexible & Dynamic Approach

- Flexible solutions via established labour pools
- Respond rapidly to time-critical events
- Maintain the highest standards of safety and quality
